

Aspen Active™ P-TLSO

CODE L0456 APPROVED

Aspen's innovative Active Postural-TLSO is designed to address the symptoms associated with poor posture. With the increased use of cell phones and computers, shoulders can become rounded causing postural kyphosis. This device is designed to actively influence posture by providing gentle support while activating and strengthening the necessary muscles that promote proper spinal alignment. The Active Postural-TLSO is lightweight and can be worn throughout the day.

Active Influence for Better Posture

The NEWmatix™ System provides biofeedback to the patient and is a gentle reminder to pull the shoulders back and down, similar to a scapular squeeze exercise performed in physical therapy.

Aspen Active Influence Braces are Designed to Promote a More Natural Alignment

Aspen's Active Influence line of braces are specifically designed to help patients suffering from chronic postural conditions. These innovative braces provide postural support with the goal of reducing symptoms¹ caused by an unbalanced body position. Aspen Active Influence braces also work to encourage symmetrical spinal loading, prompting a more natural center of gravity and a restoration of normal proprioception.

NEWmatix™
COMPONENT

RELEASE VALVE
AIR PUMP

NEWmatix™ System

Different from other TLSOs, this system is designed to activate muscles to achieve a natural neutral posture.

One Size Adjustable

Pull-through sizing mechanism allows for quick and easy adjustment, without the use of tools.

Easy Release Tabs

Makes for easy doffing of brace.

Easy Access for Modification

All structural components are easily removed and can be heat molded, bent or trimmed to accommodate individual patient conditions.

Independent Tightening Mechanism

Aspen's patented 4:1 mechanically advantaged SlickTrack™ System features an independent upper and lower tightening mechanism, providing direct compression where needed to support tight muscles.

Height Adjusts for Every Body

Telescoping shoulder straps provide 6 inches of height adjustment to fit varying patient anatomies. In addition, circumferential adjustability enables a customized fit for every body.

Modular, Versatile, and Low-Profile

As patient progresses through treatment, the brace can be stepped down. Shoulder straps and lumbar belt can be removed and worn independently.
