GERY

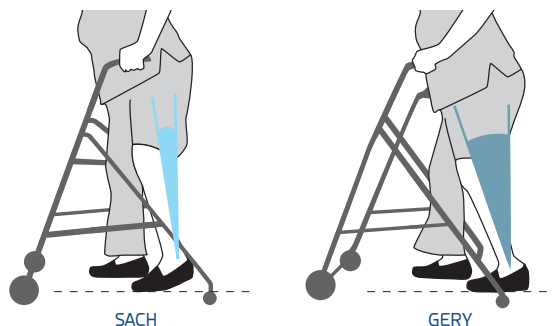

- **GERY** foot is specially designed to increase patients' independence with limited mobility (geriatric or artheritic).
- 30 % lighter than a SACH foot : its pyramid base is integrated in its EVA foot shell with closed cells.
- The flexibility of its EVA structure reduces strains on the residual limb and absorbs shocks caused by slightly uneven grounds.
- During walking or transfer the core of the **GERY** foot allows the patient to reach dorsiflexion very easily without having to raise the heel, which increases the leg segment angle and makes step completion easier.
- Easy to clean, resistant to water and damp heat.
Can be used as a bath prosthesis.

Available in ebony color
(up to 125kg)

Leg segment angle during walking

Item N°.	Color	Side	Size (cm)	Shell Material	Max. Patient's Weight.
1A200 (H)	Caucasian	-G / -D	22 to 29	EVA	150 kg
1A200 (B)	Ebony	-G / -D	22 to 25	EVA	100 kg
			26 to 29		125 kg
